

Technical Data Sheet

Magma Fiber

Product Description

Magma Fiber is a specially formulated extrusion spun mineral fiber. This coarse and long, flexible fiber will help control lost circulation by bridging and plugging off voids, fractures, and all types of permeable formations.

Applications: Should be added directly into pits and gunned into the mud. It can also be mixed through the hopper, but it is much slower

Treatments: suggested treatments for seepage losses are 1/2 sack every 30 minutes, for partial or total losses concentrations of 5 - 15 /b/bbl.

When more than 6 - 10 sacks are mixed shaker screens should be pulled.

KEY BENEFITS

- **Compatible with all types of water, and oil based muds.**
- **98.4% acid soluble**
- **Non-fermenting/Non-corrosive**

Key Properties

Physical Form	Fiber
Sg	2.6
pH	7.0 - 8.0
Packaging	30 lb sack
