

Technical Data Sheet

Fiber Fluid

Product Description

Fiber Fluid is an organic loss circulation material that prevents seepage loss and reduces torque and drag. It is an effective sealing and bridging material for depleted sands.

Applications: Fiber Fluid is effective for use in water, oil and synthetic based systems. It can be used in sweeps or pills or added to the entire system.

Treatments: typical treatments are 10 to 50 lb/bbl

KEY BENEFITS

- Provides a wide particle size distribution.
- Compatible with water, oil, and synthetic based systems.
- Available in Fine, Medium, and Coarse.

Key Properties

Color	Light Tan
Physical Form	Granular
Bulk Density	17.5 - 22.5 lb/cu.ft.
Packaging	25 lb Sack
