

Technical Data Sheet

MULTI FLUID SEAL

Product Description

MULTI FLUID SEAL is a proprietary blend of additives selected to provide lost circulation control. It is composed of cellophane, fibers and shells to provide proper particle size distribution for application across a wide lost circulation base

Applications:

MULTI FLUID SEAL is to be used for the control of lost circulation in fractures and high permeable loss zones.

Treatments:

Typical treatments should be utilized in concentrations of 3 ppb to 15 ppb in the active system. Pills of 30 – 40 ppb can also be utilized. Daily maintenance treatment are required. Pilot testing is suggested to determine the actual treatment required to obtain the desired properties.

KEY BENEFITS

- Provides superior loss circulating control.
- Provides multiple particle sized distribution in one application.
- Minimizes the potential for differential sticking.

Key Properties

Color	Light Brown
Physical Form	Solid
Sg	1.1
Solubility	Insoluble
Packaging	50 lb Sacks
