

Technical Data Sheet

PECAN NUT SHELL

Product Description

PECAN NUT SHELL is ground and processed pecan or walnut shells designed specifically for loss of circulation applications. PECAN NUT SHELL is available in fine, medium, and coarse grades, and may be used in all types of fluid systems

Applications:

PECAN NUT SHELL is to be used for the control of lost circulation in fractures and high permeable loss zones.

Treatments:

Use as needed for resolving loss of fluid circulation. Treatment levels will vary based on harshness of fluid loss and the type of formation where the losses occur. PECAN NUT SHELL may be mixed with other LCM materials to treat severe fluid loss.

KEY BENEFITS

- Provides superior loss circulating control. Proven to stop losses immediately.
- Provides multiple particle sized distribution in one application.
- Can be rapidly and effectively mixed through the hopper.

Key Properties

Color	Brown
Physical Form	Granules
Sg	0.328
Packaging	50 lb Sacks
