

Technical Data Sheet

SAFEVERT FLG

Product Description

SAFEVERT FLG is used as a fluid-loss control agent. Being a hydrocarbon, it is naturally wetted by the oil. In water-base muds, it is used as a shale-stabilizing additive and is difficult to evaluate unless tested at or above its softening point. As a hydrocarbon, the powder must be coupled to water by using a glycol or similar wetting agent.

Applications:

SAFEVERT FLG enhances drilling performance – significantly improving hole cleaning, ECD management and borehole stability, whilst optimizing reservoir protection.

Treatments:

Treatment rates may vary. Control of HTHP filtration rate is normally achieved at a concentration of 2.0 – 10.0 lb/bbl

KEY BENEFITS

- Provides better hole stability
- Averts differential sticking.
- Better fluid loss control.
- Provides a matrix for reinforcing the wellbore.

Key Properties

Color	Black
Physical Form	Powder
Sg	1.04 - 1.06
Packaging	50 lb Sacks
